

Pe-Ha-Blue[®]

Pe-Ha-Blue[®] has been developed to make ophthalmic surgeries quicker, simpler and saver. Pe-Ha-Blue[®] combines the superior viscoelastic Pe-Ha-Luron[®] F and the well known selective tissue staining agent Trypan Blue. Pe-Ha-Blue[®] is provided in a sterile ready to use syringe.

- Selective ophthalmic tissue staining
- Enhances the visibility of ophthalmic tissues during surgery
- Innovative ready to use combination of hyaluronic acid and Trypan Blue
- Time saving one step procedure: viscoelastic and Trypan Blue are administered at the same time
- Excellent protection against mechanical damages
- Easy to remove
- Proven long-term stability – non-mutagenic and non-toxic
- Sterile (steam)
- CE certified

Potential applications

- Cataract surgery
 - Visualisation of lens capsule
 - Supports capsulorhexis and capsule ablation
- Cornea transplant surgery
 - Improved visualisation of the host cornea
 - Supports accuracy

Specification:		Composition [1 ml]:	
Sodium hyaluronate	1.7 %	Sodium hyaluronate	17.000 mg
Molecular weight [mill. Daltons]	1.1 - 2.0	Sodium chloride	8.500 mg
Osmolality [mOsm/kg]	270 - 400	Disodium hydrogenphosphate	0.563 mg
Storage	2° - 25° C	Sodium dihydrogenphosphate	0.045 mg
pH	6.8 - 7.4	Trypan Blue	0.012 mg
Volume [ml]	1.0	Water for injection	q.s.
